

NEW GENERATION

Transformer Handling Movers

The latest Air Film Movers for single or dual operation

Solving has developed a new generation Air Film Movers for the handling of transformers, windings or components. The Movers are operated by a radio-remote control fitted with a colour display. This allows easy access to all the necessary information resulting in an even safer and more ergonomic operation.

Radio-remote control with display

The Movers are used in single or dual mode:

- smaller transformers and windings are moved with a single Solving Mover
- large transformers are handled with two or three Movers connected as a pair
- one single radio-remote control is used both for single and dual operation

Advantages

The high-capacity Air Film Movers incorporating all the necessary technology is designed to lift and move transformers precisely from one station to another. Electrical drive units and an integrated hose reel improve the flexibility of the Mover allowing it to be moved freely in all directions. One single operator manoeuvres the system from a portable radio-remote control. All the functions of the Movers are controlled with the radio-remote control with a display providing a both safer and more ergonomic operation.

Features

The new generation Movers include the following features:

- Radio-remote control with a 3,5" colour display
- Low profile transporter to suit handling of large transformers
- Environmentally friendly and silent
- Optimised air consumption

Options

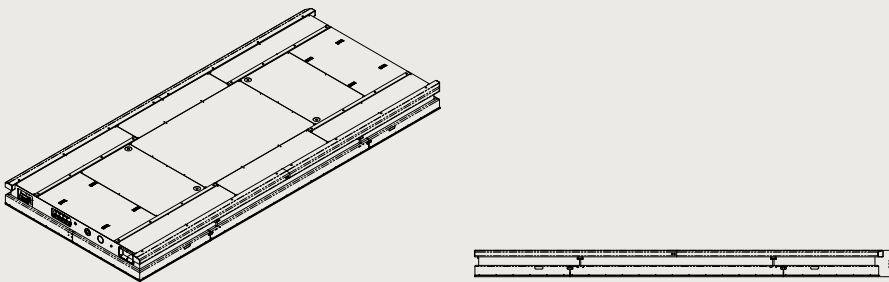

The Movers can additionally be equipped with one or more of the following:

- Rescue controller
- Optical line guidance
- 'Drive enable handle'
- Laser scanners for obstacle detection
- More precise load weight display
- 'Dual mode' for running two Movers as one pair
- Remote-access for diagnostics and support

Technical information

Type	Capacity tons	Length mm	Width mm	Height mm	Supply pressure bar	Air consumption NI/min
SAPT100W-2RE	100	4990	2200	320	7	7400
